

Business Requirements Document

OPPO Sales & Stock Analytics Dashboard

Project Overview

OPPO is a leading smartphone manufacturer with a wide distribution network consisting of regions, cities, distributors, and retail dealers. The business requires a centralized reporting solution to monitor sales performance and inventory availability across multiple levels of the distribution hierarchy.

The objective of this project is to develop an interactive Power BI dashboard that provides actionable insights into sales trends and stock management, enabling business users to make data-driven decisions.

Business Objectives

The dashboard should help stakeholders:

- Monitor overall sales performance.
 - Compare current year sales against previous year sales.
 - Identify high-performing and underperforming regions.
 - Track distributor-level sales contributions.
 - Monitor inventory availability across mobile models.
 - Identify stock shortages and excess inventory.
 - Improve inventory planning and replenishment decisions.
 - Support strategic sales and operational planning.
-

Stakeholders

Primary Users

- Sales Managers
- Regional Managers
- Area Sales Managers (ASM)
- Zonal Sales Managers (ZSM)
- Distribution Managers

Secondary Users

- Inventory Planning Team
 - Operations Team
 - Business Leadership
-

Dashboard Requirements

Page 1: Sales Analysis Dashboard

Purpose

Provide a comprehensive overview of sales performance across regions, cities, and distributors.

Key KPIs

- Current Year Sales
- Previous Year Sales
- Growth Percentage
- Year-to-Date (YTD) Sales
- Month-to-Date (MTD) Sales
- Distributor Sales Contribution

Visual Requirements

Region-wise Sales Distribution

Display sales contribution by region using a donut chart.

ZSM Performance Analysis

Compare current year and previous year sales for each ZSM.

ASM Performance Analysis

Compare current year and previous year sales for each ASM.

City-wise Sales Analysis

Display sales performance by city.

Distributor-wise Sales Analysis

Show distributor contribution and performance comparison.

Detailed Sales Table

Include:

- Region
- City
- Distributor
- Current Year Sales
- Previous Year Sales
- Growth Percentage

Filters

- Year
 - Month
 - Region
 - City
 - Distributor
-

Page 2: Stock Analysis Dashboard

Purpose

Provide visibility into inventory levels and stock coverage across distributors and product models.

Key KPIs

- Available Stock
- Average Daily Sales (ADS)
- Days of Inventory
- Dealer Coverage
- Model-wise Inventory

Visual Requirements

Region-wise Stock Overview

Display stock availability by region.

Distributor-wise Stock Analysis

Track inventory held by each distributor.

Model-wise Inventory Tracking

Monitor available stock for each mobile model.

Average Daily Sales Analysis

Calculate average sales over the last 7 days.

Dealer Coverage Analysis

Show number of dealers carrying each model.

Inventory Coverage

Calculate stock coverage based on current sales velocity.

Filters

- Region
 - Distributor
 - Mobile Model
 - Product Category
-

Data Sources

Sales Data

Contains:

- Sales Date
- Region
- City
- Distributor
- Product Model
- Sales Quantity
- Sales Value

Stock Data

Contains:

- Distributor
- Product Model
- Available Inventory
- Stock Date

Dealer Data

Contains:

- Dealer Information
 - Distributor Mapping
 - Product Availability
-

Success Criteria

The dashboard will be considered successful if it enables stakeholders to:

- Reduce manual reporting effort.
- Monitor sales performance in real time.
- Quickly identify sales opportunities.
- Improve inventory visibility.
- Reduce stock-out situations.

- Support faster business decision-making.
-

Tools & Technologies

- Power BI
 - Power Query
 - DAX
 - Excel
 - Data Modeling
 - Data Visualization
-

Expected Business Impact

The solution will provide a single source of truth for sales and inventory performance. By combining sales and stock analytics into one reporting platform, stakeholders can improve operational efficiency, optimize inventory allocation, identify growth opportunities, and make informed business decisions based on real-time data.
